MIKOŁAJ MICHALAK

FULL-STACK DEVELOPER · NEXT.JS · TYPESCRIPT · POSTGRESQL

Wrocław, Poland · Remote · Available full-time · mikolaj.michalak.dev@gmail.com · github.com/Majkan1 · linkedin.com/in/mikolaj-michalak · mikolajmichalak.dev

SUMMARY

Full-stack developer and engineering student who builds and ships Next.js/TypeScript apps end-to-end: authentication, PostgreSQL data layers, server-side validation, automated tests and CI. Designed, built and deployed two production apps solo, and has team experience in an existing codebase with pull requests and code review. Uses AI-assisted tools (Claude Code, Codex) daily to work faster, while owning and understanding every line shipped. Looking for a full-time remote role.

TECHNICAL SKILLS

Languages · TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
Frontend · React, Next.js (App Router, Server Components, Server Actions), Tailwind CSS, shadcn/ui
Backend / Data · Node.js, Express, Prisma ORM, PostgreSQL (raw SQL, JOINs, aggregates), REST APIs, Zod, migrations
Auth & Security · Clerk, protected routes, per-user authorization checks, parameterised queries
Testing · Vitest, React Testing Library
DevOps / Tools · Git, GitHub, GitHub Actions (CI), Docker, Vercel, Supabase, ESLint, Prettier
AI-assisted development · Claude Code, Codex

PROJECTS

Workout Tracker — Full-Stack App — Next.js 16 · TypeScript · Prisma · PostgreSQL

Live: workout-tracker-majkan.vercel.app · Code: github.com/Majkan1/workout-tracker

- Full-stack fitness app: authenticated users log workouts and exercises (sets, reps, weight), browse their training history and track stats on a dashboard.
- Found an IDOR vulnerability in an early version that exposed records across accounts; audited every data-access path, enforced per-user ownership checks in all server actions (Clerk auth) and locked the fix in with tests.
- Designed the PostgreSQL schema in Prisma (Workout 1-to-many Exercise, cascade deletes) with versioned migrations; every mutation is validated server-side with Zod.
- Wrote component and server-action tests (Vitest + RTL); GitHub Actions runs lint, tests and a production build on every push and pull request.
- Containerised local development with Docker/docker-compose; deployed on Vercel with Supabase PostgreSQL. 260+ commits on a feature-branch and pull-request workflow.

Workout API — Backend (REST) — Node.js · Express · PostgreSQL

Code: github.com/Majkan1/workout-api

- Rebuilt the Workout Tracker's data access as a standalone Express REST API with hand-written SQL (node-postgres, no ORM) to understand what Prisma and Server Actions abstract away.
- CRUD endpoints plus JOIN and GROUP BY aggregate queries; every query parameterised to prevent SQL injection.

Sport App — Frontend App — Next.js 16 · TypeScript · Tailwind · ISR

Live: sport-app-majkan.vercel.app · Code: github.com/Majkan1/Sport-app

- Football league and team browser on TheSportsDB's rate-limited free REST API, with instant client-side search and dynamic routes for leagues and teams.
- Chose ISR over client-side fetching to cache data and cut repeat calls against the rate limit; dedicated loading, error and not-found states per route.

EXPERIENCE

Frontend Developer — CyberTech Science Club, Wrocław University of Science and Technology — Apr – Jun 2026

- Worked in a shared, existing codebase as part of a team, following the project's established component conventions and structure.
- Built new content sections and reworked the page layout of the club's website.
- Delivered all work through feature branches and pull requests reviewed by the club lead and a senior member; iterated on review feedback until merged.

EDUCATION

Wrocław University of Science and Technology — B.Eng. ICT (Teleinformatics) — 2024 – 2028 (expected)

LANGUAGES

Polish — native · English — C1 (fluent)
